

These perspectives could be a little more straight on than these angles of view.

Fig 2

Todd, please show all three upper platens all the way to their front ends, with center one closed, no hand in drawing. Include all of the three lanes and their sidewalls in entirety. Show switches and displays as in DSC00716.jpg. Below is same pair but see change. Show top of the one upper platen as is the same 716.jpg photo.

Show  
Button 28  
like Fig 5  
Display  
reversed

Todd, note that the display window is a little larger in the newest version photos.

Fig 4

Todd, note that these switch/display pairs are entirely flat on top, unlike those in front of the movable, upper platens. This above is the front of these 8 lanes on the staging zone.

The immediately above view is the rear view of the same thing as in the way above view. Omit the extra stuff, the three container thing in front and the salad bar looking thing to the left and the control panels behind.
